

## Global Research Projects

The Global Research Projects (GRP) database highlights the work of **more than 1000 UCSF investigators** conducting projects in **more than 190 countries**. These diverse research and training projects encompass the fields of policy, epidemiology, behavioral science, diagnostics and drug development, clinical trials and bench science. The database is intended as a tool for researchers, students, and members of the global health community to explore UCSF research activities and to look for mentors, collaborators, colleagues, and experts on a range of global health topics.

The GRP database allows exploration by topic, country and region, and investigator. Key UCSF areas of focus include HIV <sup>[1]</sup>, malaria <sup>[2]</sup>, tuberculosis <sup>[3]</sup>, women's health <sup>[4]</sup>, in addition to cross-cutting themes such as implementation science <sup>[5]</sup>, epidemiology <sup>[6]</sup>, and policy and economics <sup>[7]</sup>. As a leading educational institution, UCSF is also very active in training and capacity building <sup>[8]</sup> activities.
